

Ron & Mini Ron

Ron started life as a solid round bar of material, up to 6 meters long, that was turned into smaller components through a CNC production machine. There is always a small billet of material left over. That would usually be scrapped.

The handsome people at Savage Design have collected and saved these billets and have made them into usable objects. Ron can be used for things such as a pencil holder or a vase and Mini Ron has been designed as a tea light holder but we will let you decide how they can help you.

Ron is not coated, so will age with you, though he is also open to enhancements. If you wish too, rub some metal polish on to make him shine. While the outside of Ron has been turned, to add a little bit of sparkle, it's important that you notice the bottom. Here you can see the scale, marks and markings of its former life. Because of this no two Ron's are the same, each one is unique and ready to serve you.

Ron & Mini Ron

Material

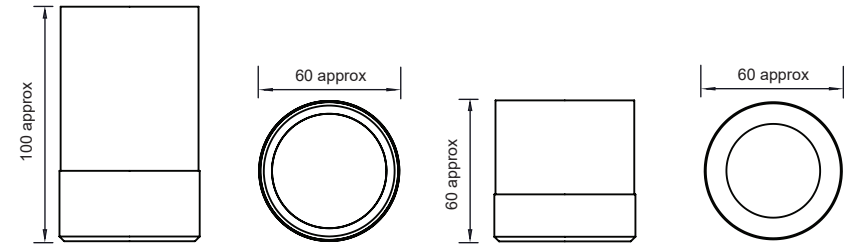

Recycled billets

Brass
Stainless Steel

Weight

Ron - 690g Approx.
Mini - 770g Approx.

Dimensions

Raw materials

This product is made from raw material and is prone to aging
